

## The enthusiasm for water

Swimming pools, ponds, and natural pools are the epitome of fun, relaxation and wellbeing. Whether big or small, public or private, open or in nature - in and around water, children and adults will find the perfect balance to the everyday life.

Because of the enthusiasm for water, we are dedicated to exceptional system solutions for artificial and natural water systems. As a professional for activities in and around the basin, we plan, manufacture, supply and install our custom systems of all sizes and requirements for new facilities and renovations.

Many of our products and services have grown to market innovative ever-greens. This situation does not stop us to optimize it all the time - simply for the pleasure of continuing development and a satisfied customer base.

**REINHARDT-PLAST**  
GMBH

System solutions are our element.

- RRSys overflow gutter
- RRSys components (PVC/FPO/PE)
- RRSys components (stainless steel)
  - Foil lining
- Pool-/pond-restoration
  - Concrete cutting
  - Core drilling
- Accessories for pond installations

## Individual, flexible, systemic

### RRSys gutter systems

Gutter systems are the lifeblood of an economically sustainable and hygienic operation of swimming pools, ponds and natural pools. All components of the RRSys gutter system are designed for getting the optimal solution of your individual pool concept.

The RRSys gutter system is a high quality design and flexible to realize your ideas. All premanufactured concrete products are made individually and in circular and elliptical shapes available, so that the realization of your creative spa and pool design has no limits.

We offer a complete service for disassembly, assembly, miter cutting, core drilling, foil lining and more. All our system solutions applies principally: Nothing is impossible, only the right solution needs to be found. We stand for this ideology with our expertise and practical experience.

## Combined, adjustable, versatile

### RRSys components

RRSys components consist of a main body and a vulcanized peripheral foil stripe and the respective attachments, for example inlet nozzles. The vulcanized foil stripe makes it possible, that the RRSys components will be fitted into the liner homogeneously.

The foil stripe could be made of PVC, PE or FPO performed with internal reinforcement tissue. A variety of different bottom-nozzles could be supplied with check valves if necessary – for optimum protection against polluted backwaters.

## To give water a limit is our nature

### Components for ponds and natural pools

We supply foil sheets and the required installation components in the well known RRSys version with vulcanized foil stripe for proper welding into the foil liner. The clips for the curb are prefabricated foil-coated metal sheets and are suitable for proper welding too.

Curbs made of concrete with embedded foil-coated metal sheets (FPO / PVC) are ideal tools for the delimiting of paving stones, grass or sandy surfaces. Individual circle or ellipses forms could be produced by segment cuts easily.
